

IN THE CLAIMS

Kindly amend claims 18 and 21 as shown in the following claim listing:

1. (original) A method for recording content on a record medium (2) that contains a desired content descriptor (3), comprising the steps of: reading said desired content descriptor (3) from said record medium (2); scanning the content (10, 12) of at least one multimedia source (6, 7) for desired content that matches said desired content descriptor (3); and recording said desired content on said record medium (3).

2. (original) The method according to claim 1, wherein said desired content descriptor (3) is already contained in a blank of said record medium (2).

3. (original) The method according to claim 1, wherein said desired content descriptor (3) is not already contained in a blank of said record medium (2).

4. (previously presented) The method according to claim 1, wherein said desired content descriptor (3) contained in said record medium (2) cannot be further altered or augmented.

5. (previously presented) The method according to claim 1, wherein said desired content descriptor (3) contained in said record medium (2) can be further altered and augmented.

6. (previously presented) The method according to claim 1, wherein said desired content descriptor (3) can be transferred from said record medium (2) to a record medium (2) of the same type or to a record medium (2) of a different type.

7. (previously presented) The method according to claim 1, wherein said record medium (2) is suited for electric and/or magnetic and/or optic recording of content.

8. (previously presented) The method according to claim 1, wherein said desired content descriptor (3) is a keyword or a list of keywords.

9. (previously presented) The method according to claim 1, wherein said desired content descriptor (3) obeys a pre-defined content description format.

10. (previously presented) The method according to claim 1, wherein said desired content descriptor (3) comprises multimedia samples.

11. (previously presented) The method according to claim 1, wherein said desired content descriptor (3) is a pre-defined content descriptor.

12. (previously presented) The method according to claim 1, wherein said desired content descriptor (3) is defined by the user of said method.

13. (previously presented) The method according to claim 1, wherein said content (10, 12) from at least one multimedia source (6, 7) comprises image and/or audio and/or text information.

14. (previously presented) The method according to claim 1, wherein said at least one multimedia source (6, 7) is a receiver (6) for television and/or radio programs.

15. (previously presented) The method according to claim 1, wherein said at least one multimedia source (6, 7) is a device (7) that is connected to a computer network, in particular to the internet.

16. (original) The method according to claim 13, wherein said step of scanning the content (10, 12) of said at least one

multimedia source (6, 7) for said desired content comprises image and/or audio and/or word processing.

17. (previously presented) The method according to claim 1, wherein said step of scanning the content (10, 12) of said at least one multimedia source (6, 7) for said desired content is performed dynamically depending on the available amount of content (10, 12) and/or on the already recorded content.

18. (currently amended) A ~~computer program~~ machine-readable product directly loadable into the internal memory of a digital computer, comprising ~~software~~ code portions for performing the method steps of claim 1 when said product is run on a computer.

19. (original) A device (1) for recording content (10, 12) on a record medium (2) that contains a desired content descriptor (3), comprising: means (16) for reading said desired content descriptor (3) from said record medium (2); means (13, 15) for scanning the content (10, 12) of at least one multimedia source (6, 7) for desired content that matches said desired content descriptor (3); and means (18) for recording said desired content on said record medium (2).

20. (original) The device (1) according to claim 19, wherein said

means for scanning (13, 15) the content (10, 12) of said at least one multimedia source (6, 7) for said desired content comprises means (13) for image and/or audio and/or word processing.

21. (currently amended) A record medium (2) ~~containing~~ comprising a desired content descriptor (3), ~~wherein said~~ and means for reading said desired content descriptor (3) ~~can be read~~ from said record medium (2) to trigger the scanning of content (10, 12) of at least one multimedia source (6, 7) for desired content that matches said desired content descriptor (3) and that is recorded on said record medium (2).

22. (original) The record medium (2) of claim 21, wherein said record medium (2) is suited for electric and/or magnetic and/or optic recording of content.
